

British Statesmen Tour Canada

Twenty-one members of the United Kingdom's delegation to the Empire Parliamentary Association conference in Australia in the fall who arrived at Quebec on the S.S. "Empress of Scotland." The delegation is headed by the Rt. Hon. Arthur Henderson, former Secretary of State for Home Affairs and vice-chairman of the delegation. The Marquis of Salisbury who is chairman, arrived in Canada earlier and will meet the delegation in Vancouver when they will sail on the S.S. "Aurora" for the Commonwealth. Traveling over the Canadian Pacific lines, the Parliamentarians will tour leisurely across Canada visiting most of the principal cities making a study of conditions in this Dominion. A motor trip from Banff to some of the beauty spots in the Canadian Pacific Rockies is anticipated before the party embark for the Antipodes.

The conference in Australia will be of an informal nature, taking place in all the states of the Commonwealth. They will be met in Australia by representatives of the parliaments of the Union of South Africa, Northern Rhodesia, Malta, New Zealand and the Legislature of British India. The delegation is

going to assist in the celebrations in connection with the opening of the new Australian capital, but at the same time an intensive study of conditions in that Dominion will be made. They will obtain first-hand knowledge on economic problems and trade development and a study of the Dominion's affairs as a whole will be made. Conferences of a similar nature will be held every two years following an agreement reached at the 1924 South African meeting.

The members of the party from left to right are: Top row—E. M. O. Clough, secretary of the South African branch; Sir Frank Nelson; Sir Howard Phipps; Rt. Hon. Jan MacPherson, K.C.; Rt. Hon. Arthur Henderson, Chief Whip; Rt. Hon. Sir Evelyn Cecil, G.B.E.; Dr. J. H. Williams, Major Bryan Cooper, Chairman of the Irish Free State branch; Senator Sir Edward Geoghegan, Irish Free State. Top row—E. A. Broad, A. V. Alexander, Luke Thompson, J. B. Cooper; Sir Sydney Henn, K.B.E.; Senator Michael F. O'Hanlon, Irish Free State; W. Mackinder; Brig. Gen. C. R. Ingham Brooke, C.M.G., D.S.O.; & Lemly Col. the Hon. Angus MacDonnell, C.B., C.M.G.; Dr. T. Drummond Shiels, M.G.; Oswald Esmonds, I.D., Irish Free State.

High School Exams

A detailed report of the results of the High School examinations will be published in an early issue of the News. First, second and third year students wrote in all, 182 papers. These marks were obtained in 142, giving the school an average of 78 per cent passes. Calgary classes obtained an average of 81 per cent passes.

Teachers Convention

A convention of the teachers of the Oyen Inspectorate, will be held in Oyen, probably on October 21 and 22. The ladies of Oyen are urgently requested to throw open their homes to the teachers who will be paying guests. Kindly communicate with Mr. William Irvine, president, phone 45, Miss Gladys Caldwell, secretary, telephone, phone 55, or Mr. F. La Ayleworth, inspector, phone 55, as soon as possible, should you have accommodation.

Fall Chautauqua For Oyen

Mrs. Newman, chautauqua agent, was in town last week and obtained the necessary number of guarantors, for a 3 day fall chautauqua in Oyen.

Summary of Season's Rainfall

April	11 in.
May	1.08 in.
June	1.60 in.
July	2.28 in.
August	2.28 in.

The above figures are those recorded on the gauge kept by Mr. W. V. Miller at Oyen.

A permanent home in Rosetown about the end of this month.

Mr. W. T. England, who returned to Oyen last Thursday, after an extended business trip was a hospital patient for a few days, suffering from pneumonia.

On the return, last Sunday, of Mrs. England and children from Exeter, Ont., where they have been spending a holiday, Mr. England left hospital for his home. He is reported to be making satisfactory progress.

T. W. Johnston, who has been building a garage for Mr. F. H. Peterson, in Rosetown, was a town visitor last Monday. Mr. Johnston has disposed of his house in Oyen and will make

Selection of Dairy Cattle Breeds Influenced by Shows

A good typical Ayrshire cow

Putting on the finishing touches

Many a man who is undecided as to the breed of dairy cattle that he will select has been influenced in making his decision by the animals of a particular breed that he has seen in public.

The individual breeder secures a great deal of advertising as the result of exhibiting at fairs, or in offering good animals at public sales. It gives people a chance to see and know the kind of stock that a man is raising and paves the way for future business.

It is essential that special care and attention be given dairy animals far into the season of the year that they are to be exhibited or sold. Exhibiting or selling animals publicly in their every day clothes is poor advertising and puts them at a disadvantage when the competition is seen. It takes several weeks to put a dairy animal in good show condition and what applies to fitting for show applies as well to fitting for sale.

It is important that the dairy animal be exhibited or sold in good flesh. A good covering of flesh adds to size, increases smoothness and indicates that the animal is thrifty and in good health. Dairy animals being fitted need extra feed. Stabling and blanketing are great aids in putting the hair and hide in the animal in the best condition for the show which makes the hide harsh and stiff to the touch. A red head or tail that is kept clean and well bedded

provides desirable quarters. Continuous blanketing helps give the animal clean, smooth hide, thus improving its handling qualities and makes the hair lay to the body. The blanket need not be expensive but it must be laid on securely.

Every dairy animal that is to be exhibited should have the hair clipped from the entire body about three weeks previous to the date of the show or sale. This gives the hair a chance to grow and show a new, even growth to the show or sale and greatly improves the appearance and increases the selling value of the animal.

While in the show or sale ring, the preparation of a dairy animal for show or sale is that of a lead and stand properly. It is a great deal of work to do, but it is well worth the effort of the attendant to exhibit it properly. A little time spent each day in training to handle properly will save effort and embarrassment at the show or sale and increase the financial return.

While in the show or sale ring, the man in charge of an animal should have one rule, though in mind, namely that of showing the animal in advantage. By this is meant that when it stands, its feet are properly placed, neck straight and head alert. Any movement on the part of the attendant or animal should be graceful as possible. Until the animal is sold or the auctioneer's hammer falls, take no chances.

HENRY FORD

Gives Runners Knock-out Blow

Another job has been given the runner and prizefighter—expediently.

Henry Ford, while visiting the President Coolidge Adjunct camp, declared, according to newspaper men, that the Ford Motor Company would not put a six-cylinder car on the market. He denied this report emphatically. "We have no present plans to change our model or introduce a new type," he said, as reported by the press.

The above is an extract from the Ford News of recent date.

Care Of The Work Horse

Much Suffering Is Caused Through Carelessness and Neglect

Few people realize the suffering that the average horse undergoes through deprivation and neglect, to say nothing of the unnecessary punishment to which he is subjected day after day. Most of his suffering perhaps is caused by a lack of water. A not because water is high-priced or hard to get, but because of carelessness on the part of those in charge of the horses. Many horses suffer for want of feed, partly because of the high price of feed, but mostly because of indifference. Many times when a young horse is taken to the tank with the bit in his mouth he will not drink. He tries to dislodge the bit, douse his

repeatedly until the driver, in his impatience, pulls him away without water, though he may then have been away from water for hours. A horse thus mistreated suffers from thirst, yet he is expected to go on and do his work cheerfully, or be abused if he does not.

Not one-tenth of our horses are harnessed so that they do not become sore somewhere if worked continuously. It may be the shoulders, the top of the neck, the tail, or back of the foreleg. The young horse, born

much more subject to these injuries than an older one. For that reason he should not be worked more than two or three days at first, and then be turned out for a week to heal up. That which makes him sore makes him suffer. When sore he suffers more. When harnessing him after he has healed up, be careful to readjust the harness to protect places where he was sore, for, after all, most sores come from misfit or maladjusted harness. A collar that is not long enough or that is not properly padded will cause neck sores.

Pulling the collar too long at a time will cause sore shoulders. The skin on the shoulders is as thin and tender as it is anywhere else. Continued pressure, such as pulling

use, will crush bloodcells and affect the finer tissues to such an extent that the blood cannot carry off the

Stop the horse every half-mile for one minute. This gives the blood time to rush through the cells, carry off the waste and so prevent sores from developing. On the road to wagon, these stops are not necessary, as the rise and fall of the ground provide the changes.

There is altogether too much punishment inflicted on horses in breaking and, including the broken season,

lead, the war bridle, the pulley bri

Then, too, means and methods that inflict pain are employed to hold the young horse when first hitched, and to train him to stop, to turn and to back, and to stand until commanded to go. Here, again, the five-ring halter will answer in every case, and wearing it the horse will get his lesson at all.

In the former case one appeals to one's

To sum it all up, see that the horse has plenty of good water, and a sufficient amount of good feed for comfort and maintenance; fit and pad his harness so that he will not get sore; give him a kind word and

and study his wants and needs. It was difficult to him—Manitoba, Ex-

Good Deal Harder

The Hearst papers are now republishing some of the kind things said by allied leaders when the United States entered the war. They would find it a good deal harder to republish some of the kind things the Hearst papers said about the allies either then or at any other time.—To onto Mail and Empire.

Ostrich Makes Good Racer

Ostrich racing is a popular sport in Vienna and Rome. The ostriches are treated just like racehorses, and have trainers and jockeys. Their speed is about the same as that of a galloping horse.

hour, whilst even with two men on the back of each other, has been known to

run faster than a horse. The average length of their stride is 12 feet.

Superiority Of Canadian Bred Fowl Shown In Competition With Southern Reared Birds

It is anticipated that the World's Poultry Congress, to be held at Ottawa in the summer of 1927 will bring between 5,000 and 6,000 delegates (including friends, probably 15,000 people) all ready to Ottawa from all parts of the world. These parties will tour the country in all directions. "It will be seen that the 'old' longer lived Canadian hen not only adds greatly to the annual production of the nation, but is also making known throughout the Canada's resources in the different countries of the world," says F. C. Clifford, Dominion poultry husbandman, in an article showing that Canada leads the world in many phases of the poultry industry.

Superiority of the Canadian-bred and raised domestic fowl is demonstrated in competition with birds from more southerly countries and its results of egg-laying competition in foreign countries. In view of the general tendency shown by the more northerly developed strains of plants and animals to "export" locally, especially their southern products, Mr. Clifford remarks. He also points out that though the hen is a native of this country, the turkey, partridge, guinea fowl, the duck and the famous Canada goose are indigenous to this country. The two latter are migratory, and when they are released, three exceedingly well here the year round.

Dual Federal and Provincial governments in Canada have done much to encourage poultry raising. In the Dominion, poultry work is carried on at the Central Experimental Farm, Ottawa, and at 25 branch farms and at substations. Poultry breeding is conducted at all the farming, egg-laying, competition, and is fostered by the poultry division of the experimental farm, and there has been established the Canadian Record of Poultry and Eggs, which is the poultry, all of which develop having laying strains and increase production of the whole country. As a result of this combination of ideal climate and concentrated effort to increase and improve the poultry industry, and the fact that Canada has increased threefold in its poultry industry, and its increased egg production per hen has increased considerably since 1912.

Wage War On Weeds

Estimated That Saskatchewan Farmers Will Lose \$300,000,000 This Year From This Pest.

Weeds will cost the farmers of Saskatchewan more than \$300,000,000 this year, according to M. P. Tullis, field crops commissioner for the Saskatchewan Government.

Mr. Tullis states that weeds throughout the province have been exceptionally bad this year, and that mustard, wild oats and wild tistle having been most troublesome.

The field crops branch is making the most effort to reduce the weed problem in the agricultural districts to the end of putting up a strenuous fight against the overgrowing weed pest. To save the grain of Saskatchewan, says Mr. Tullis, it is imperative that a province-wide movement for clean farms be started, which will mean the ultimate saving of hundreds of millions of dollars to the farmers of Saskatchewan.

While it may be of small comfort to the farmers of this province, the field crops commissioner says that weeds are worse across the border in the Northern United States, where in some cases, weed legislation has never been enforced, with the result that the average damage of grain in some of the five time harvesting in the Saskatchewan product.

World's Only Woman Admiral
Olga of Greece, who died recently at her villa in Rome at the age of 75, was the only woman admiral the world has known. Olga Queen, before her marriage to King George of Greece, was a Russian Grand Duchess. In recognition of her deep interest in Russian affairs, King George conferred upon her the rank of admiral in the Russian navy.

The Foggiest Place
It was not Mr. Vanderbilt, Jr. who told us that he had been contradicted in the statement that London was the foggiest place in the world. Whoever it was said that his critic had added, "I was once in a foggiest place myself." "Where was that?" "In the foggiest place," "I don't know," answered the clever fellow, "it was so foggy."—The New Yorker.

Natural Resources Bulletin

Remarkable Engineering Feats in Canada That Have Never Been Equalled

It is perhaps not inappropriate that the country to which the most ingenious engineers of the world are flocking, the beaver, a native, should also have developed some of the finest engineering talent and organization ever employed in the interests of civilization. Canada's tremendous railway and highway undertakings, her unprecedented expansion of the pulp, paper and lumber industries, her vast hydraulic power developments, her widespread mining activities, her canal and irrigation systems have, perhaps, never been equalled in extent or efficiency by any nation of comparable population and, in some respects, by any country whatever the population.

The two great railway systems, the Canadian National and Canadian Pacific Companies are among the greatest in the world for their magnitude and efficiency—about 45,000 miles of railways, courteously and thoroughly administered. Canada also requires represent an investment of over 250 million dollars and her system of navigable waterways and inland lakes are unparalleled, it is estimated that about half of the world's known fresh water areas are in this country.

Canada's 116 pulp and paper mills have now definitely assumed their place in the international newspaper race with an annual production of the pulp of between 200 and 260 million dollars, annually, with some remarkable individual properties. Her submarine cable mines represent tremendous engineering achievement, while her nickel, asbestos, gold and lead-zinc producers have developed their resources to the point where they have the largest individual ore deposits of their kind known to be in existence.

It is interesting to note, in this connection, that the report that the surface of the Dominion is geologically favorable to mineralization and of this, only a few small patches have been as yet thoroughly prospected. In the damming of Canada's rivers for the purpose of power development, some of the greatest engineering works of the present day are being undertaken. The year of 1925 alone saw the completion of a million horsepower brought into production, a figure that will stand comparison with any country at any stage of its history. A single plant now being constructed on the Saguenay River is to have an ultimate installation of 30,000 horsepower. The Canadian installations stand at 4,200,000 horsepower (about one-tenth of the available total), and represent an investment of nearly a thousand million dollars.

This is a long step, marks the natural resources indifference service of the department of the interior, from the wood and mud dams of the industrial Canadian beaver surely, but it is quite in keeping with the modern beaver methods of other days should have expanded into huge and costly storage basins, the highest of their kind ever known, and used in the least by huge structures of concrete and steel, designed and built by human engineers, on the same sound basis and using the same tools used through the possession of some God-given instinct.

Roller Skates De Luxe

Roller skates fitted with acetylene rollers, consisting of two especially constructed cylinders, have been invented by a German. The skates are capable of six hours' continuous running, and develop a speed of 25 miles an hour.

B.C. Potatoes For California
Arrangements for the export of large quantities of British Columbia seed potatoes to California are being made this year by a potato grower of that state. The British Columbia potatoes are desired in California for seed purposes because they introduce new strength into the southern strain. Experiments made with Canadian seed potatoes last year in California and growers were well satisfied with the results.

A Bride's Regret
Bride: "He's awful, mother! He doesn't believe in bridge, dancing, or any amusement."
Mother: "But you must remember, dear, you took him for better or worse."
Bride: "Yes, but it would be so much better if he were worse!"—By Standish.

He: "Oh-ho, because I am so restless and unmanageable."
She: "No, because you make me sick."

A pony is defined as a horse under 15 hands high.

Crate Feeding Poultry

Best Method to Follow For High-Class Trade

Table poultry intended for high-class trade should be properly finished before being marketed. Feasting only increases the weight of the fowl, it also greatly improves the quality. This results in a much better price per pound being secured. It is best accomplished by crate feeding for from two to four weeks, depending on the condition of the birds. There is a bulletin on the preparation of poultry for market distributed by the Publications Branch, Department of Agriculture, Ottawa, which tells in detail how to make crates and how to feed and care for the birds while in them. According to the bulletin, medium-sized birds belonging to the general purpose breeds, give the best results in the crates. The birds should be of strong constitution and five months old or over.

When the birds are first put in the crates they should be fed lightly for several days, after that, as much feed as they will take twice a day should be given. The use of soft milk in crate feeding is indispensable where high quality is the object. The milk is mixed with finely ground grain to about the proportion of three pounds milk to two of grain, and all the birds will eat, should give them twice a day. Any mash left over should be removed immediately. Corn, oats, barley and buckwheat are the grains generally used in the mash, and they should always be finely ground. A good mixture consists of equal parts of corn, oats and buckwheat. Buckwheat is especially profitable from the elevators, gives excellent results and is usually cheap. It is fed with sour milk in the usual manner. Whole grain must never be given.

Age Of Queens In

Brood Production

Colonies Wintered in the Cellar and Outside Picking Cases

The project of a queen in the division of the Dominion experimental farms in 1924 to determine the average daily egg production of young versus old queens was continued in 1925. Two of the colonies were wintered in the cellar, one with a queen in her first year and the other with a queen in the second year. Two other colonies were wintered outside in picking cases. Queens in a similar way. Queens were taken every seven days from May 10 to July 25. Very full statistical tables in the report of the Dominion project for last year give the results in 1924 and 1925. These show that in both years the youngest queens gave up the oldest colonies the highest egg production during the earlier part of the year when, as suggested in the report, which can be had at no cost no addressing the Publications Branch, Department of Agriculture, Ottawa, high brood production is of vital importance, especially in localities where the main loss comes early, such as from Alaska clover. This condition, however, the reports show, was reversed in the colonies wintered in the cellar.

Canadians Leave

Returning to Their Homes Where Wage Are as High as in Maine
According to reports received here from the northeastern part of the state, Canadians who have been employed in lumber and railroad projects are leaving for their homes where it is claimed they can get as high wages as they have been receiving in Maine. So great is the exodus that it is feared that industrial projects in that section of the state will be largely abandoned.

How's That?
The installment salesman was visiting the railroad shops. "This man you fellows call 'Slim' Johnson wants to buy a car on time payments, is he honest?"
"Mister," answered the foreman, "Slim is one of the squarest men in the roundhouse."

The only exercise many people get in jumping to conclusions.
Africa comprises nearly one-fourth of the earth's land surface.

Making the Farm Home a More Desirable Place To Live In By Beautifying Its Surroundings

May Apply For Copyright

Canadian Cattle Club Think Jersey Products Need Protection

The Canadian Cattle Club is seriously considering the copyrighting of the name "Jersey" when used in connection with any dairy products. The club has been at a great deal of trouble and expense to create a quality Jersey article and has succeeded so far that many consumers of dairy products are willing to pay practically double for the Jersey article what they are willing to pay for any other sort of milk. The result is that a great many "shrewd" people are trading on the name Jersey. If "Jersey" can be copyrighted by the club it is a grade superior removed from the pure-bred strain, they will sell their milk as Jersey milk and the public are misled. The result is that much milk low in real Jersey quality is palmed off on the unsuspecting consumers. Inevitably the producers of really qualified Jersey are the sufferers. The aim of the Jersey men is to see that only producers of "really qualified" Jersey milk can sell their milk as Jersey article shall be allowed to use the name "Jersey." That is, no one shall be allowed to use the name on it if he had been inspected by a few fully qualified experts satisfactory to the club and passed upon as satisfactory not only to the club, but to the consumers. This is a significant move and one that deserves earnest consideration.

Alfalfa and Rye or Brome Grass

The Most Economical and Profitable For a Good Hay Mixture

It being evident that alfalfa and western rye grass provide a good hay mixture as the superintendent of the Indian Head, Sask., Dominion experimental farm (W. H. Gibson) says in his last report, the question naturally arises what is the most economical and profitable of these to sow. A table giving the results from thirteen years presented in the report indicates that a rate of six pounds of alfalfa and eight pounds of rye grass per acre (or even four and eight) is satisfactory.

A table is also given in the report of the results of substituting western rye grass with timothy in a mixture with alfalfa. In general, the results are similar, but, says Mr. Gibson, after the first crop there is an increasing tendency of the timothy to choke out the alfalfa. He therefore recommends the combination of alfalfa and western rye.

Canadians Leave

Returning to Their Homes Where Wage Are as High as in Maine
According to reports received here from the northeastern part of the state, Canadians who have been employed in lumber and railroad projects are leaving for their homes where it is claimed they can get as high wages as they have been receiving in Maine. So great is the exodus that it is feared that industrial projects in that section of the state will be largely abandoned.

Just As Good
Customer: "I want two pounds of rice, please."
Clark: "I'm sorry, we've no rice, madam. Would you care for?"

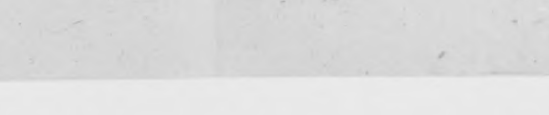

Men Outnumber Women
An interesting feature of the preliminary report of the Irish census, showing a decrease in the population of all Ireland of 100,000 during the past 15 years. It is that males outnumber females in the Free State. Reversing the relative position of 1911 there are now 972 men for every 1,000 women. In Northern Ireland there are 1,066 women for every 1,000 men.

School Dialogue
Teacher: "Now, James, what is the United States of America?"
James: "Dunno."
Teacher: "Yes you do. What is it that you do with your eyes?"
James: "Mother says I squint."

"What would you do with a million dollars?"
"Buy a decent watch. I'm always late to work."

Jim Brewster Isn't Shy

Seven years ago Jim Brewster, Western guide and outfitter, took the journey with the Trail Riders of the Canadian Rockies on an early ride. His long ramblings on the trail made him a popular member of the party on the next ride.

Just how many people do save?

A man may read of the large deposits placed in banks and come to the conclusion that everyone is saving money—perhaps except himself.

The fact is that a great many people save nothing whatever, and that the proud crop capita showing of savings in Canada is built up by the thirty.

It is the savers, however, not the non-savers, who control their own welfare and take advantage of their opportunities. It is the savers who succeed.

The Bank of Toronto not only welcomes depositors but extends a friendly personal service which aims to promote in every way the welfare of its clients.

Poised Like Bird Against Mountains

Miss Lydia Fulcher, champion of the Calgary Swimming Club, has shown Lake Louise, its yellow, orange and white popples, its distant, silent mountains and gay tourist throngs, how the swimmer should be done. She is a true mermaid of the Canadian West, schooled in the aquatic art in the Canadian government's great pool, the Cave and Basin, at Banff, where she has many times swum since her youngest days.

Miss Fulcher became a champion last year at the Banff Winter Carnival when swimmers dived into the Cave and Basin, filled with hot sulphur water from Sulphur Mountain, while the temperature outside through the open roof of the Basin was sinking below the zero mark. This fancy diver has also

demonstrated her ability as a speed swimmer. The above photograph shows Miss Fulcher poised in mid-air in the most graceful of dives, with an excellent show of Mount Victoria in the distance—some eyes and half miles away. With the diver is shown also the glacier as well as the foreground in sharp detail despite the fact that the exposure was timed to the infinitesimal fraction of a second.

The new pool, situated at Lake Louise, is one of the most popular in the Canadian Pacific Rockies. It is about 90 feet in length and eight feet in depth at the deepest point. There are springboards at various heights to suit the expert or amateur diver, and the water is warm enough to attract those not wishing to venture into the cooler depths of Lake Louise itself.

for Economical Transportation

First to get away!

YOU'll find the smooth Chevrolet set away in the front of the traffic line. At the sound of the whistle or the light of the word "Go!" the smooth Chevrolet is first to get away.

Chevrolet will run rings around larger, cumbersome cars—wreathing in and out of traffic with an ease that is almost uncanny. Chevrolet may be turned completely around in the width of an ordinary road. It can be parked with ease in a surprisingly small space. It will gather speed on hills where bigger cars lose their slow down. And always

the Chevrolet driver knows that, pulsating quietly beneath the hood, is abundant power that will not fail him in an emergency, while Chevrolet, above any car in its class, possesses the smoothness that makes driving—either fast or slow—a drive of pleasure and satisfaction.

The Smoothest Chevrolet is Chevrolet history is selling the Lowest Price for which Chevrolet has ever been sold in Canada.

Let your Chevrolet dealer arrange a demonstration and terms of purchase under the GMAC Deferred Payment Plan.

DEALER

About Town and Country

Sir William and Lady Slingo of London, Eng., who arrived in Oyen last week are visiting their daughter, Mrs. T. Thompson. Sir William, who has retired from active business, was knighted in 1915, in recognition of his brilliant services, rendered as Engineer in chief of the British Post Office Service. After 50 years service, he retired from this office, and later went to Peru, where, for 4 years, he was Director General of Postal, Telegraph and Wireless Services for the Mercosini System.

Sir William and Lady Slingo will visit Banff before returning to their home in London.

Miss Beth Pfeiffer, who has been spending two weeks holiday in Oyen, left last Saturday for Kindersley, Sask., where she will visit her brother, before returning to Chicago.

Mr. John Nisemith of Craigville, was a town visitor last Saturday.

Mr. William L. Irvine, principal of Oyen School, returned from his holidays, yesterday.

P. H. Peterson, of Rosetown, Sask., was an Oyen visitor last Monday. Mr. Peterson has just had a new garage built in Rosetown and is dealer for Nash and Paige cars.

Dr. JAMIESON, CHIROPRACTOR

keep Yourself fit

"All work and no play makes Jack a dull boy!" To make a success of the old battle of life you must develop physically as well as mentally. Billiards on the modern Brunswick equipment for your recreation is the game to do it.

In Lighter Vein

A tonal day, buys the doctor's coo-py.

"Your Ford shimmies, eh?" said Salesman Shorty. "Well, Judge, be thankful it doesn't do a Charleston." (We must get this in Lighter Vein).

In a passionate outburst of eloquence in denunciation of the world's wickedness the rivalist declared: "Hell is full of cocktail, hip flasks, short skirts and bobbed hair."

Voice from audience: "Oh, Death, where is thy sting?"

Looking at an inscription on a newly erected stone in a cemetery, which read "Here lies a lawyer and an honest man," the visitor remarked "I didn't know it was customary to bury two men in one grave."
